

Outdoor Living

- Outdoor living is one of the hottest trends for homeowners.
- Natural gas appliances make it easy and convenient to extend the outdoor living season without the worries of running out of fuel.
- Stylish products - from simple to high-tech - help you customize your outdoor room and not exceed your budget.

Extend Your Living Space

According to outdoor design professionals, Americans seek creative ways to extend their living space to the outdoors. Whether people want to entertain, socialize or dine al fresco, the backyard is the place to be.

With natural gas appliances, the backyard can be converted into a family's personal retreat space. Numerous gas products are available to enhance your outdoor experience:

- **Grills** are more economical than either charcoal or propane models. Because you don't have to wait for the coals to heat up, cooking times are shorter.
- **Outdoor fireplaces** are efficient and convenient. They are available in many styles and sizes and can be installed almost anywhere.
- **Firepits** can be built-in or portable. They are available in a variety of finishes and they can be installed on wooden decks, patios or concrete.
- **Patio heaters** typically provide a 15' – 20' circle of heat, warming objects and not the air. They can be free-standing, or post-, wall-, or ceiling-mounted.
- **Pools and spa heaters** are very efficient; some models are up to 95% efficient. They can heat water quickly and can maintain temperature regardless of the outdoor weather.
- **Gaslights** offer the perfect solution for lighting patios, decks, and walkways. They do not attract insects, like electric lights, and offer security during power outages. They can be mounted on posts, pedestals or walls.

Get connected – easily and safely

Gas convenience outlets are a great way to add versatility and safety to your outdoor room.

Gas convenience outlets:

- Make installing and moving your gas appliances almost as easy as plugging and unplugging electrical appliances.
- Increase appliance portability so you can redesign your outdoor space and reposition your appliances at any time.
- Feature an automatic shut-off valve, which prevents gas from flowing unless the appliance is connected correctly.
- Allow you to easily and safely disconnect and store your appliances when the outdoor season is over.
- Help ensure that you never run out of fuel by using natural gas instead of wood or propane.
