

Space Heaters

- Natural gas space heaters are an efficient and economical choice for heating (or supplementing heat) in certain rooms or areas of a home.
- Natural gas space heaters are compact and provide instant heat.
- Natural gas space heaters can often operate without electricity.

Energy-Efficient and Economical

Natural gas space heaters are an efficient and economical choice when you need to heat only certain rooms or areas. Thinking of making a play room for your children in the basement? Want to add a work shop in the garage? Consider installing a natural gas space heater to heat these areas or any additional living space in your home that is currently not heated. Many models are equipped with push-button ignition or are thermostatically controlled so you don't have to heat the space when it is not occupied.

Types of Space Heaters

Convective heaters warm the air in a room. The heated air rises which then circulates throughout the room. Some models can also be used with an optional blower for even heat distribution. Types of convective heaters include wall-mounted, blue flame, baseboard, and floor-mounted units.

Radiant heaters send heat out like the sun, and heat the people and objects in a room. Some of the heat is produced by direct radiation from warmed surfaces.

Flexible to Meet Your Needs

Natural gas space heaters are available in both vent-free and vented models. Many units do not require electricity in order to operate, providing ultimate flexibility.

Natural gas space heaters:

- Are compact. They can be mounted on a wall, in a floor, or on baseboards.
- Provide instantaneous heat.
- Generally range from 6,000 to 40,000 BTUs. Consult your dealer or utility representative to find the system that best meets your needs.
- Are available with programmable thermostats and timers on some units.
- Can often operate without electricity, great for use during power outages.
